Admin/System User Stories

Student User Stories

User Story #1 – Student Login

User Story:

As a student, I want to log into my account in order to securely access my course registration and schedule.

Description:

The system allows students to log in using their student ID and password to access registration, schedules, and other academic features.

Priority: High

Priority Justification:

Student login is a core feature because users must be authenticated before accessing registration, schedules, or personal academic information.

Acceptance Criteria:

- Students can log in using a valid student ID and password.
 - Invalid login attempts display an appropriate error message.
 - Successful login redirects the student to the dashboard.
 - Students can securely access their account information.
-

User Story #2 – Course Search

User Story:

As a student, I want to search for available courses in order to find classes that meet my academic needs.

Description:

The system provides a search feature that allows students to locate courses by course name, course number, instructor, or subject.

Priority: Medium

Priority Justification:

Course search improves the registration experience by helping students quickly find classes, but registration can still function without advanced search capabilities.

Acceptance Criteria:

- Students can search by course name or course number.
 - Students can filter courses by subject or instructor.
 - Search results display matching available courses.
 - Students can view course details from the search results.
-

User Story #3 – Register for a Course**User Story:**

As a student, I want to register for a course in order to enroll in classes for the upcoming semester.

Description:

The system allows students to select an available course and complete the registration process if all enrollment requirements are met.

Priority: High

Priority Justification:

Course registration is one of the primary functions of the system because it allows students to enroll in classes needed for their degree.

Acceptance Criteria:

- Students can select an available course for registration.
- The system verifies eligibility before registration is completed.
- Successful registration updates the student's schedule.
- The student receives a confirmation that registration was completed successfully.

User Story 4: View Current Schedule**User Story:**

As a student, I want to view my current course schedule, in order to confirm which classes I am registered for during the semester.

Description:

This feature allows students to see their registered courses in one place, including course name, section, meeting time, instructor, and location. It helps students stay organized and verify that their registration is accurate.

Priority: Medium

Priority Justification:

This is medium priority because it provides strong value to students after registration, but it depends on students first being able to search for and register for courses.

Acceptance Criterion:

Given that a student is logged into the system, when they open their schedule page, then the system displays all courses the student is currently registered for.

User Story 5: Drop a Course

User Story:

As a student, I want to drop a course from my schedule, in order to adjust my enrollment before the registration deadline.

Description:

This feature allows students to remove a course from their current schedule. The system should update the student's enrollment record and remove the course from their displayed schedule.

Priority: Medium

Priority Justification:

This is medium priority because dropping a course is an important part of managing enrollment, but it is not as foundational as logging in, searching for courses, or registering for a course.

Acceptance Criterion:

Given that a student is registered for a course, when they choose to drop that course and confirm the action, then the system removes the course from the student's schedule.

User Story 6: Receive Registration Confirmation

User Story:

As a student, I want to receive a registration confirmation, in order to know that my course registration or schedule change was completed successfully.

Description:

This feature provides confirmation after a student registers for or drops a course. The confirmation should clearly show the action completed, the course involved, and the updated registration status.

Priority: Medium

Priority Justification:

This is medium priority because it improves trust and communication for students, but it supports the registration process rather than being the main registration function itself.

Acceptance Criterion:

Given that a student successfully registers for or drops a course, when the action is completed, then the system displays a confirmation message with the course information and updated status.

Instructor User Stories

User Story #7 – Instructor Login

User Story:

As an instructor, I want to log into my account in order to access my assigned courses and teaching information.

Description:

The system allows instructors to securely log in using their credentials to view course schedules, class rosters, and other teaching resources.

Priority: High

Priority Justification:

Instructor login is essential because instructors must be authenticated before accessing course information and student records.

Acceptance Criteria:

- Instructors can log in using valid credentials.
- Invalid login attempts display an appropriate error message.
- Successful login redirects the instructor to their dashboard.
- Instructors can securely access their assigned courses.

User Story #8 – Instructor View Assigned Schedule

User Story:

As an instructor, I want to view my assigned teaching schedule in order to manage my classes and prepare for each semester.

Description:

The system displays the instructor's assigned courses, meeting times, classrooms, and semesters after a successful login.

Priority: Medium

Priority Justification:

Viewing an assigned schedule helps instructors stay organized and prepare for classes, but it depends on the login functionality being available first.

Acceptance Criteria:

- Instructors can view all assigned course sections.
 - The schedule displays course names, meeting times, and classroom locations.
 - Schedule information is accurate and up to date.
 - Instructors can access the schedule after logging in.
-

User Story #9 – Instructor View Course Roster

User Story:

As an instructor, I want to view the roster for a course section in order to see which students are enrolled in my class.

Description:

The system allows instructors to access a list of enrolled students for each assigned course section, including basic student information.

Priority: Medium

Priority Justification:

Course rosters help instructors manage attendance and communicate with students, but this feature depends on successful course registration and instructor login.

Acceptance Criteria:

- Instructors can select one of their assigned course sections.
- The system displays a complete list of enrolled students.
- Student roster information is accurate and up to date.
- Only instructors assigned to the course can view its roster.

User Story #10 – Admin Add/Update Courses

User Story: As an administrator, I want to add or update courses in order to keep course information accurate and up to date.

Description: The administrator can create new courses and edit existing course information, including the course name, course number, description, and credit hours.

Priority: Medium

Priority Justification: This feature keeps course information accurate for students and instructors. It is important for system maintenance but is not as critical as preventing registration errors.

Acceptance Criteria:

- Administrators can create a new course.
- Administrators can edit an existing course.
- Updated course information is saved successfully.
- Students can view the updated course information.

User Story #11 – Admin Manage Course Sections

User Story: As an administrator, I want to manage course sections in order to organize class schedules and instructor assignments.

Description: The administrator can create, edit, and remove course sections while assigning instructors, classrooms, and meeting times.

Priority: Medium

Priority Justification: Managing course sections supports registration and scheduling. It is essential for organization but depends on core registration features.

Acceptance Criteria:

- Administrator can create a new course section.
- Administrator can assign an instructor to a section.
- Administrator can update classroom and meeting times.
- Changes are saved successfully.

User Story #12 – Prevent Duplicate or Time-Conflict Registration

User Story: As a student, I want the system to prevent duplicate or time-conflicting registrations in order to maintain a valid class schedule.

Description: The system checks for duplicate enrollments and overlapping class times before completing registration.

Priority: High

Priority Justification: This is a core system feature that prevents invalid schedules and improves the registration experience.

Acceptance Criteria:

- The system detects duplicate registrations.
- The system detects time conflicts between classes.
- Registration is blocked if a conflict exists.
- The student receives an error message explaining the conflict.

Person 4 Final Responsibilities

- Combine all team members' user stories into one document.
- Check formatting, grammar, and consistency.

- Ensure each story includes a description, priority, priority justification, and at least one acceptance criterion.
- Add the team contribution statement.
- Upload the completed product backlog to the team's GitHub repository.
- Include a screenshot of the GitHub repository showing the uploaded document.

Contribution Statement

All team members actively participated in planning, discussing, writing, reviewing, and completing the Product Backlog assignment.

User Story 12

User Story

As a student, I want the system to prevent duplicate or time-conflicting course registrations so that I have a valid class schedule.

Description

The system should automatically detect duplicate registrations and schedule conflicts before a student completes course registration.

Priority

High

Priority Justification

Preventing duplicate registrations and schedule conflicts is critical because it protects the integrity of the registration process and ensures students cannot enroll in invalid schedules.

Acceptance Criteria

The system prevents students from registering for the same course more than once.

The system detects schedule conflicts between selected courses.

An error message explains why registration cannot continue.

The student must resolve all conflicts before completing registration.
